2. Citations and explanations (Rule 70.7)

The invention of the claims is to a tool for helping to lay tiles onto an adhesive layer comprising a raised hand or foot support having a plurality of legs splayed outwardly and downwardly from the support which is thereby raised to a working height above the floor on which the legs rest.

No individual citation or obvious combination of citations disclose a foot or hand support suitable to be used in the laying of tiles on an adhesive layer.

The closest art cited in the International Search Report is NL 1000367 which is designed to be used to straddle a roof ridge capping and does not include a raised hand or foot rest.
